# About this User's Guide

Used symbols	The following symbols are used in this User's Guide:		
	A <b>note</b> provides additional information about a topic.		
	A <i>tip</i> provides an alternative method or shortcut to perform an action.		
	A <i>caution</i> warns you about potential problems or specific precautions that need to be taken.		
Terminology	Generally, the SpeedTouch™706(i) and the SpeedTouch™ 706(i) WL will be referred to as SpeedTouch™ in this User's Guide.		
Documentation and software updates	THOMSON continuously develops new solutions, but is also committed to improve its existing products.		
	For suggestions regarding this document, please contact <u>documentation.speedtouch@thomson.net</u> .		
	For more information on THOMSON's latest technological innovations, documents and software releases, visit us at: <u>www.speedtouch.com</u> .		

About this User's Guide

# speed**touch**™

# 1 Getting to know your SpeedTouch<sup>™</sup>

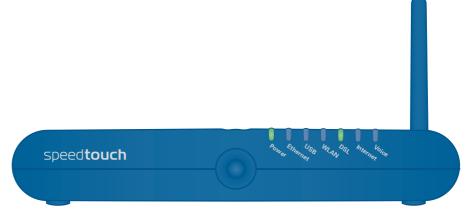

Introduction	With the SpeedTouch <sup>™</sup> 706 (WL) (Wireless) Residential DSL Gateway with Voice over IP (VoiP) you can build a secure home or small office network, seamlessly connecting wired and wireless devices, surf the Internet at high speed, make and receive phone calls over the Internet or over the traditional phone line - all combined in one device.
Installation	For more information on how to set up, install and wire your SpeedTouch™ and set up Internet connection, refer to the Installation and Setup Guide.
Configuration	This User′s Guide will help you configuring your SpeedTouch™.
Before you begin	Before connecting the SpeedTouch™, please read the SpeedTouch™ Quick Installation Guide and the Safety Instructions and Regulatory Notices.

# 1.1 SpeedTouch™ LED Behaviour

### Front panel LEDs

The SpeedTouch<sup>™</sup> is equipped with a number of LEDs on its front panel, indicating the state of the device during normal operation.

The following table shows the meaning of the different LEDs.

Indicator			Description
Name	Colour	State	
Power	Green	Solid on	Power on, normal operation
	Red	Solid on	Power on, self-test failed, indicating device malfunction
	Orange	Solid on	Bootloader active
	Off		Power off
Ethernet	Green	Blinking	Ethernet activity
		Solid on	Ethernet connection, no activity
	Off		No Ethernet connection
USB	Green	Blinking	USB activity
		Solid on	USB connection, no activity
	Off		No USB connection

Indicator			Description
Name	Colour	State	
WLAN	Green	Blinking	Wireless activity, WPA encryption
		Solid on	No wireless activity, WPA encryption
	Amber	Blinking	Wireless activity, WEP encryption
		Solid on	No wireless activity, WEP encryption
	Red	Blinking	Wireless activity, no security
		Solid on	No wireless activity, no security
	Red/ green	Toggling	Wireless client registration phase
	Off		WLAN disabled
DSL	Green	Blinking	Pending DSL line synchronisation
		Solid on	DSL line synchronised
	Off		No DSL line
Internet	Green	Blinking	Internet activity
		Solid on	Internet connectivity, no activity
	Red	Solid on	Internet connection setup failed
	Off		No Internet connection
Voice	Green	Solid on	VoIP service up
		Blinking	VoIP activity
	Off		VoIP service down

# 1.2 Accessing your SpeedTouch™

### Access methods

Your SpeedTouch<sup>™</sup> is accessible in one of the following ways:

Access Method	Can be used to	
Web browser	Configure your SpeedTouch™ via HTTP or HTTPS. For more information, see "1.2.1 Access via the Web Interface" on page 7.	
Command Line Interface (CLI)	Fine-tune your SpeedTouch™ configuration. For more information, see "1.2.2 Access via CLI″ on page 8.	
File Transfer Protocol (FTP)	Back up and restore data on your SpeedTouch™. For more information, see "1.2.3 Access via FTP″ on page 10.	
Remote Assistance	Allow a remote user to help you configuring your SpeedTouch™. For more information, see "1.2.4 Remote Assistance" on page 13.	

# 1.2.1 Access via the Web Interface

To access the SpeedTouch™ via the Web interface Proceed as follows:

- 1 Open a Web browser.
- 2 In the address bar, type your SpeedTouch™'s IP address or DNS host name (<u>http://speedtouch.lan</u> or <u>192.168.1.254</u> by default)
  - You can access the pages via HTTP or HTTPS.

For remote assistance the secure version HTTPS is used in combination with certificates. Simply provide your ISP with the link as shown, user name and password before he can log on to the pages. For more information, see "1.2.4 Remote Assistance" on page 13.

The SpeedTouch<sup>™</sup> Home page appears, from where you can navigate to all the configurable aspects of the SpeedTouch<sup>™</sup>.

For more information on the Web pages, see "5 SpeedTouch™ Web Interface" on page 43.

# 1.2.2 Access via CLI

To access the SpeedTouch™ via the Command Line Interface (CLI) You can access the Command Line Interface (CLI) via:

A Telnet session

This requires a TCP/IP connection between the host from which the Telnet session is opened and the SpeedTouch<sup>™</sup>. Your SpeedTouch<sup>™</sup> and the connected computer must have an IP address in the same subnet.

Quote site commands (over FTP)
 For more information, see " Quote site command" on page 12.

For more information on CLI commands, see the SpeedTouch<sup>™</sup> CLI Reference Guide.

# To start a Telnet session

Proceed as follows:

- 1 Open a telnet application.
  - You can use the **Command Prompt** window.
  - In Microsoft Windows XP for instance:
    - 1 On the Windows taskbar, click **Start**.
    - 2 Select (All) Programs > Accessories > Command Prompt.
- 2 Connect to your SpeedTouch<sup>™</sup>.
- In the Command Prompt window:

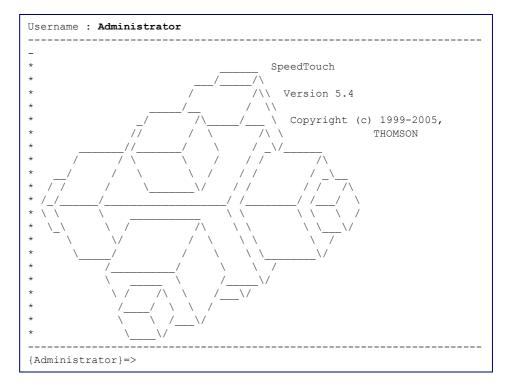

At the prompt, type **telnet** followed by the IP address of your SpeedTouch<sup>™</sup> (192.168.1.254 by default).

3 Enter your SpeedTouch<sup>™</sup> security user name and password.

-

The default user is 'Administrator' and the default password is blank.

As soon as you have opened a session to the CLI, the SpeedTouch<sup>™</sup> banner is displayed, followed by the CLI prompt, as shown in the example below.

# 1.2.3 Access via FTP

To access the SpeedTouch™ via the	(FTP), in order to:		
File Transfer Protocol	Restore or back up configuration files, templates or language packs.		
(FTP)	<ul> <li>Upgrade your configuration.</li> </ul>		
File system	The SpeedTouch™ file system is stored on non-volatile memory and contains the SpeedTouch™ software, service template files and (optionally) default setting files.		
To open an FTP session	Proceed as follows:		
	1 Open a Command Prompt window.		
	In Microsoft Windows XP for instance:		
	I On the Windows taskbar, click Start.		
	2 Select (All) Programs > Accessories > Command Prompt.		
	At the prompt, type ftp followed by the IP address of your SpeedTouch™ (192.168.1.254 by default).		
	3 Enter your SpeedTouch <sup>™</sup> security user name and password.		
	The default user is 'Administrator' and the default password is blank.		
	The example below shows an FTP session to the SpeedTouch™ file system.		
	C:\WINDOWS\system32\cmd.exe - ftp 192.168.1.254  Microsoft Windows XP [Uersion 5.1.2600] (C) Copyright 1985-2001 Microsoft Corp.  C:\Documents and Settings\nielsenv>ftp 192.168.1.254 Connected to 192.168.1.254. 220 Inactivity timer = 120 seconds. Use 'site idle (secs>' to change. User (192.168.1.254:(none)): Administrator 331 SpeedTouch (00-0E-50-5A-D9-A0) Password requered. Password: 230 OK ftp>		
File system structure	The structure of the file system is very simple: it consists of a single root directory called <i>root</i> and a subdirectory called <i>dl</i> (download).		
	• The <i>root</i> directory contains:		
	All the necessary files for the SpeedTouch™ to start correctly		
	• the dl directory		
	The <i>dl</i> directory contains the software image.		

# speed**touch**™

# File system access rights

In the different directories you have the following rights:

speed**touch**™

Directory	Access rights
root	NO read/write
dl	read/write

# Common FTP commands

Depending on the access rights you have in a directory, you can use one of the following commands:

Use the command	to
cd	access another directory than the one currently open. Example: ftp>cd dl.
dir	list the directory files. Example: ftp>dir.
bin	set the transfer mode to 'binary'.
hash	turn on the hashing option.
put	upload files. Example: ftp>put C:/MyBackupFiles/user.ini. A configuration file must be uploaded to the dl directory.
get	download files. Example: ftp>get user.ini. Downloading the configuration file must be done from the dl directory.
delete	delete files.
bye	quit FTP.

### FTP file transfer

To allow correct file transfers, set the transfer mode to "binary": at the ftp prompt, type **bin** and press ENTER.

Turn on the hashing option to see the progression of the file transfer: At the ftp prompt, type **hash** and press ENTER.

Example.

```
/home/doejohn{1}$ftp 192.168.1.254
Connected to 192.168.1.254
220 Inactivity timer = 120 seconds. Use 'site idle <secs>' to change.
Name (192.168.1.254:doejohn):
331 SpeedTouch™ (00-90-D0-01-02-03) User 'doejohn' OK. Password requir
ed.
Password : ######
330 OK
ftp>
ftp>bin
200 TYPE is now 8-bit binary
ftp>
ftp>hash
200Hash mark printing on (8192 bytes/hash mark).
ftp>cd dl
250 Changed to /dl
ftp>put C:\user.ini
200 Connected to 192.168.1.10 port 1271
150 Opening data connection for user.ini
226 File written successfully
ftp: 256 bytes sent in 0,000Seconds 256000,000Kbytes/sec.
ftp>
```

### Quote site command

All the CLI commands can be executed from within an FTP session. Only complete CLI commands (in other words, the complete command syntax with all the parameters already specified) can be executed.

Example: To execute the CLI command :ip iplist to list all IP addresses currently assigned to SpeedTouch<sup>™</sup> interfaces, at the FTP prompt, type 'quote site ip iplist' and press ENTER.

iplist		
Туре	IP-address	Point-to-point/Mask
Ethernet	10.0.0.138	255.255.255.0
Ethernet	*192.168.1.254	255.255.255.0
Serial	81.240.198.191	81.240.198.1
Internal	127.0.0.1	255.255.255.255
200 CLI command "ip iplist" executed		
ftp>		
	Type Ethernet Ethernet Serial Internal	Type         IP-address           Ethernet         10.0.0.138           Ethernet         *192.168.1.254           Serial         81.240.198.191           Internal         127.0.0.1

For more information on CLI commands, see the SpeedTouch<sup>™</sup> CLI Reference Guide.

# 1.2.4 Remote Assistance

To access the SpeedTouch™ remotely You can make your SpeedTouch accessible from the Internet with regard to remote support. In this way, you can allow your help desk to access your SpeedTouch<sup>™</sup> remotely.

To enable remote access

Proceed as follows:

- 1 Go to the SpeedTouch<sup>™</sup> pages, as described in "1.2.1 Access via the Web Interface" on page 7.
- 2 In the menu, select **Toolbox > Remote Assistance**.
- 3 Click Enable Remote Assistance.
- 4 Provide the following parameters to your help desk:
  - URL (the HTTPS link)
  - User name
  - Password

Your ISP is now able to access your SpeedTouch<sup>™</sup> via the HTTPS link in combination with the provided certificate (a secure authentication mechanism).

To disable remote access For security reasons, remote assistance will be automatically disabled after 20 minutes of inactivity, or after restarting your SpeedTouch™.

Proceed as follows: **1** Go to the SpeedTouch™

- Go to the SpeedTouch<sup>™</sup> pages, as described in "1.2.1 Access via the Web Interface" on page 7.
- 2 In the menu, select **Toolbox > Remote Assistance**.

speed**touch**™

3 Click Disable Remote Assistance.

# 2 Local Network Setup

Introduction	The SpeedTouch™ offers you the following local networking solutions:		
	Wired Ethernet		
	▶ USB (v1.1)		
	Wireless Ethernet on the SpeedTouch™706 WL		
Device settings	Once you have connected a device, you can personalise its settings. For more information, see " Configure" on page 93.		

# 2.1 Wired Ethernet

Local network	The Ethernet ports on the back panel allow you to connect the SpeedTouch™ to a existing 10 or 100Base-T Ethernet network or one (or more) computer(s) with an installed Ethernet card.			
	Using the SpeedTouch™ Ethernet switch, you can create a local Ethernet network of up to two devices, without needing extra networking devices.			
	In the SpeedTouch™ package, a yellow full-wired straight-through RJ-45/ RJ-45 Ethernet cable is included.			
Standard wiring procedure	Use the yellow Ethernet cable provided to wire your computer's Ethernet port to one of the SpeedTouch™'s Ethernet ports.			
	The Ethernet cable can also be used to wire an Ethernet port of your SpeedTouch™ to any external Ethernet hub or switch.			
	Please follow the installation instructions supplied with the external hub or switch for connections and Ethernet cabling.			
Ethernet link check	Depending on the SpeedTouch™ model, LED indicators allow you to check your Ethernet. See "1.1 SpeedTouch™ LED Behaviour" on page 4 for more information.			
Device settings	Once you have connected a device, you can personalise its settings.			
	For more information, see " Device settings" on page 15.			
Managed Ethernet switch	Your SpeedTouch™ intelligently switches data between the devices on your LAN, using priority queuing to ensure that higher priority messages are delivered first and in real time. This feature maximizes your network performance.			
	The managed Ethernet switch allows you to configure a Virtual Local Area Network (VLAN), group ports or isolate a port, configure secure channel connections, define Quality of Service (QoS), and configure port mirroring, allowing monitoring from one port to another.			
	You can configure the managed Ethernet switch manually using CLI (For more information, see the SpeedTouch™ CLI Reference Guide).			

C THOMSON

# To install Windows USB drivers

The first time you connect the SpeedTouch<sup>™</sup> to your computer through the USB port, you will be prompted for a USB driver as soon as you plug the USB cable into the computer.

You can find the required USB driver software on the Setup CD. The installation is Plug and Play, meaning that installation requires almost no effort.

Proceed as follows:

1 Insert the blue USB cable into the SpeedTouch<sup>™</sup> USB port marked with the USB logo:

A USB logo looks like this:

2 Insert the other end of the USB cable into (one of) the USB port(s) of your computer. In most cases your computer's USB port is marked with the same USB symbol.

You can also connect your computer to the SpeedTouch™ via a USB hub.

Microsoft Windows will automatically recognise the Thomson USB Remote NDIS device.

The Windows Found New Hardware Wizard appears:

This wizard will guide you through the installation procedure of the USB drivers.

3 Click Next to continue.

The Windows Found New Hardware Wizard may ask your authorisation to connect to Windows Update to search for software. If this is the case, select **No, not this time**, and then click **Next**.

4 Select Install the software automatically (Recommended), and then click Next.

The USB driver is being installed. After a while a completing dialogue will appear.

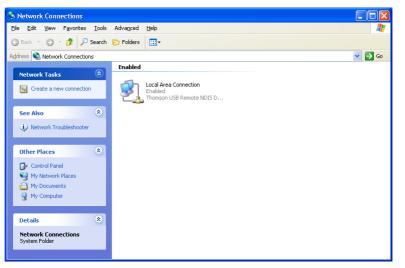

5 Click **Finish** to complete the installation.

Your USB connection is installed and ready for use.

To verify USB connectivity in Windows

The SpeedTouch<sup>™</sup> USB connection is represented as a local network interface. You can easily check this interface by opening the Network Connections window from Windows' Control Panel.

### To install Mac USB drivers

You can find the required USB driver software on the Setup CD. The installation is Plug and Play, meaning that installation requires almost no effort.

Proceed as follows:

 Insert the blue USB cable into the SpeedTouch<sup>™</sup> USB port marked with the USB logo.

2 Plug the other end of the USB cable into (one of) the USB port(s) of your computer. In most cases your computer's USB port is marked with the same USB symbol.

You can also connect your computer to the SpeedTouch™ via a USB hub, provided that the hub is autonomously powered.

Mac OS X will automatically recognise the detection of a new port.

- 3 Make sure the SpeedTouch<sup>™</sup> Setup CD is inserted, and then click **OK**.
- 4 In the Network window, click **Apply Now**.

Device settings Once you have connected a device, you can personalise its settings. For more information, see " Device settings" on page 15.

## 2.3 Wireless Ethernet

Introduction The SpeedTouch™706 WL Wi-Fi® certified IEEE 802.11g compliant wireless access point allows multiple computers to connect wirelessly to your local network over the SpeedTouch™ Wireless LAN environment. The SpeedTouch™ is backward compatible with IEEE 802.11b, which means 802.11b and 802.11g devices can coexist in the same wireless network. The Wireless Distribution System (WDS) on your SpeedTouch™ allows you to extend the range of your wireless network. To be able to use WDS, you will need to introduce an additional WDS-enabled access point into your wireless network. To be able to connect the computers, make sure that a wireless client adapter (WLAN client) is installed on each computer you want to connect via the WLAN. Wireless client All wireless client adapters compliant to 802.11g and/or 802.11b can communicate requirements with the SpeedTouch<sup>™</sup> and other members of the SpeedTouch<sup>™</sup> (W)LAN environment. However, be aware that only 802.11g compliant wireless clients are able to gain full profit of the 54 Mb/s (Max) bandwidth delivered by the SpeedTouch<sup>™</sup>. It is highly recommended to use only wireless client adapters that are Wi-Fi™

certified to ensure smooth interoperability with the SpeedTouch™'s WLAN.

# 2.3.1 Wireless Basics

802.11b/g	<ul> <li>802.11b is an IEEE standard, operating at 2,4 GHz at a speed of up to 11 Mb/s.</li> <li>802.11g, a newer IEEE standard also operating at 2,4 GHz, gives you up to 54 Mb/s speed, more security and better performance.</li> </ul>		
Wireless Fidelity	The Wi-Fi certification ensures that your SpeedTouch™ will interoperate with any Wi-Fi certified 802.11g and 802.11b compliant wireless device.		
Access Point	The SpeedTouch™ Wireless LAN Access Point (AP) behaves as a networking hub allowing to wirelessly interconnect several devices to the local (W)LAN and to provide access to the Internet.		
Network Name or SSID	The WLAN's 'radio' link is a shared medium. As no physical connection exists between the SpeedTouch <sup>™</sup> and wireless clients, a name must be given to allow unique identification of your WLAN radio link. This is done by the Service Set ID (SSID), also referred to as Network Name. Wireless clients must be part of this SSID environment in order to be able to communicate with other clients on the (W)LAN - including the SpeedTouch <sup>™</sup> .		
Radio channels	The 802.11g standard allows several WLAN networks using different radio channels to be co-located. The SpeedTouch™ supports multiple radio channels and is able to select the best radio channel at each startup.		
	You can choose to set the channels automatically or manually.		
	The different channels overlap. To avoid interference with another ac point, make sure that the separation (in terms of frequency) is as high possible. It is recommended to keep at least 3 channels between 2 dir access points.		
	The SpeedTouch™ supports all channels allowed for wireless networking. However, depending on local regulations, the number of channels actually allowed to be used may be additionally restricted, as shown in the table below.		
	Regulatory Domain	Allowed Radio Channels	
	China	1 to 13	
	Europe	1 to 13	
	Israel	5 to 8	
	Japan	1 to 14	
	Jordan	10 to 13	
	Thailand	1 to 14	
	USA / Canada	1 to 11	

Antennas

Direct the external antenna to allow optimization of the wireless link. If for example the antenna is erect, wireless links in the horizontal plane are favoured. Please note that the antenna characteristics are influenced by the environment, that is by reflections of the radio signal against walls or ceilings. It is advisable to use the received signal strength as indicated by the wireless client manager to optimize the antenna position for the link to a given client.

Concrete walls weaken the radio signal and thus affect the connection.

### Wireless default settings

After every Reset-to-Defaults, the SpeedTouch<sup>™</sup> wireless access point configuration is returned to its initial default settings.

These default settings are:

- Security level is low (security disabled) for an easy first use, meaning the data will not be encrypted. Wireless security settings are described in "2.3.3 Wireless Security" on page 25.
- This default network name (SSID) is printed on the identification label located on the bottom of your SpeedTouch<sup>™</sup> and is unique for each device. It consists of the concatenation of the word "SpeedTouch" and 6 hexadecimal characters, without any spaces, for example SpeedTouch123456.
- The SpeedTouch<sup>™</sup> is broadcasting its network name (SSID).
- The radio channel number is set to 'automatically scan for the best radio channel'.
- Registration is not activated. New stations are allowed automatically. The Access Control List is open and empty. No wireless client will be denied access to the SpeedTouch<sup>™</sup> based on its physical hardware address.

To prepare wireless clients for the first time

### Make sure that:

- ► The SpeedTouch<sup>TM</sup> is turned on and ready for service.
- The SpeedTouch™ is in its default configuration.
  - If necessary, reset the SpeedTouch™ to its default configuration (See "6.4 Reset to Factory Defaults" on page 112 for more information).
- A wireless client adapter is installed on your computer.
- The wireless client adapter's IP configuration is set to dynamically obtain its IP configuration (DHCP) this is usually the default. For more information, see the documentation of your wireless client adapter.

# To configure wireless clients for the first time

The wireless client must be correctly configured for the default network name. As the SpeedTouch<sup>™</sup> broadcasts its network name to the wireless clients, you can select the SpeedTouch<sup>™</sup> wireless network from a list of available networks. Depending on your wireless client a wireless icon may become green or a message similar to the following may appear: "Successfully joined Wireless network SpeedTouch123456".

Some wireless clients do not automatically join a wireless network. If so, follow the instructions for the wireless client software to initiate association.

# speed**touch**™

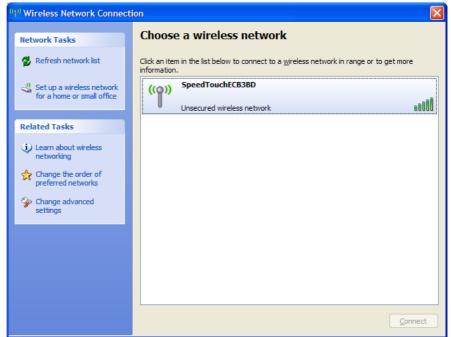

# First-time association example

The example below shows how the SpeedTouch<sup>™</sup> wireless network is presented towards a Windows XP Service Pack 2 system.

Proceed as follows to associate your wireless client to the SpeedTouch™:

- 1 Click the network icon in the notification area:
  - The Wireless Network Connection window appears:

2 In the **Choose a wireless network** list, select the SpeedTouch<sup>™</sup> wireless network and click **Connect**.

The following window appears:

Wireless Network Connection		
♪	You are connecting to the unsecured network "SpeedTouchECB3BD". Information sent over this network is not encrypted and might be visible to other people.	
	Connect Anviery	

### 3 Click Connect Anyway.

Your computer is now connected to the SpeedTouch<sup>™</sup> wireless network.

((@))	SpeedTouchECB3BD	Connected 👷
	Unsecured wireless network	

For other Operating Systems the wireless client will in most cases be configured via dedicated client managers.

# 2.3.3 Wireless Security

Introduction	Since the SpeedTouch <sup>™</sup> wireless environment is a radio environment, precautions must be taken to ensure that your wireless network is safe from malicious intruders.			
	To secure your wirele personalised:	ess network, the following wireless access point settings can be		
	<ul> <li>Your Network Name (SSID)</li> </ul>			
	<ul> <li>ACL setting</li> </ul>			
	<ul> <li>Data encryption</li> </ul>			
Security settings	To personalise the wi	reless security settings on your SpeedTouch™:		
	1 Go to the Speed	lTouch™ Web pages.		
	2 In the menu, se	lect Home Network.		
	3 Click your WLAN.			
	4 In the upper right corner, click <b>Configure</b> .			
	5 On the Wireless	Access Point page, you can modify the Security settings.		
	Security			
	Broadcast Network Name:			
	Allow New Devices:	New stations are allowed (automatically)		
	Encryption:	O Disabled		
		Use WEP Encryption		
		Use WPA-PSK Encryption		
	WPA-PSK Encryption Key:	4627F08CB3		
	WPA-PSK Version:	WPA V		
		Apply Cancel		
Network Name (SSID)	On the Wireless Acce	ess Point page, you can give a new name to your Network		

Name (SSID).

Under **Security**, you can clear **Broadcast Network Name (SSID)**, to prohibit the Network Name from being broadcast.

Access Control List (ACL)	The SpeedTouch™ features a managed Access Control List (ACL) and a physical registration mechanism in the form of the Association / Registration button on the front panel of your SpeedTouch™.
	On the <b>Wireless Access Point</b> page, you have the following options for the ACL: <b>New stations are</b>
	Allowed (automatically): All new stations can access the SpeedTouch™.
	<ul> <li>Allowed (via registration): Only allowed stations in the ACL have access. You can add new stations via:</li> </ul>
	The Association / Registration button.
	The Search for wireless devices task.
	For more information, see " Registering wireless clients" on page 27.
	Not allowed: Only allowed stations in the ACL have access. You can add new stations to the ACL only via the Search for wireless devices task. For more information, see " Registering clients via Web pages" on page 27.
Data encryption	To set up wireless connectivity, you can choose different levels of security:
	<ul> <li>Security disabled (default) No security; the data will not be encrypted, no authentication process will be used.</li> </ul>
	WEP (Wired-Equivalent Privacy) Traffic between the SpeedTouch <sup>™</sup> and the clients is encrypted by sharing a pre-defined 64-bit or a 128-bit Network key for secure communication with legacy 802.11b clients.
	The default 64 bit hexadecimal WEP key is printed on the identification label located at the bottom of the SpeedTouch <sup>™</sup> and is unique for each device.
	WPA-PSK (Wi-Fi Protected Access Pre-Shared Key) The highest form of security available for home users. Make sure that your wireless client and client manager are compatible with it.
	The default WPA-Personal pass phrase is printed on the identification label located at the bottom of the SpeedTouch <sup>™</sup> and is unique for each device.
	The WPA-Personal pass phrase must consist of 8 to 63 ASCII characters or 8 to 64 HEX digits.
	Wireless access points may already have been configured during the Home Install Wizard.

If you change wireless settings, wireless clients will be disconnected. In this case, you need to reconfigure the wireless clients before you can connect to the Internet again.

# speed**touch**™

# 2.3.4 Connecting Additional Wireless Clients

Preconditions	<ul> <li>Make sure that:</li> <li>The SpeedTouch<sup>™</sup> is turned on and ready for service.</li> <li>The SpeedTouch<sup>™</sup> has been configured as DHCP server (default).</li> <li>The wireless client adapters have been installed on all the computers you</li> </ul>
	want to connect to the WLAN.
Security issues	Depending on the personalised wireless settings:
	Make sure you use the same encryption or security level on the client as on your SpeedTouch <sup>™</sup> . If for instance WPA-PSK is enabled on the SpeedTouch <sup>™</sup> , you must also configure the wireless client to use WPA- PSK and configure the same WPA-PSK pass phrase.
	If the Network Name (SSID) is not
e	Ι

Registering clients via the association button

Proceed as follows to register new wireless network clients via the association button:

1 Push the Association button on the SpeedTouch<sup>™</sup>front panel for at least two seconds.

The WLAN LED toggles between green and red.

The ACL will be unlocked for a time frame of one minute. Any new wireless client successfully attempting to connect to the SpeedTouch<sup>™</sup> (having the correct wireless settings, that is the network name and, if required, the network key) within the time frame of one minute, will be added to the table. The SpeedTouch<sup>™</sup> automatically saves your current configuration at the end of the registration phase.

- Some WLAN clients do not automatically join a WLAN. If so, follow the instructions for the WLAN client software to initiate the association.
- 2 Successfully registered stations are associated to the SpeedTouch<sup>™</sup> WLAN. Depending on your WLAN client adapter, a wireless icon may become green or a message similar to the following may appear: "Successfully joined Wireless network SpeedTouch123456".
- 3 The wireless clients will be added to the SpeedTouch<sup>™</sup> ACL.
- 4 After one minute the ACL is locked.

The registration procedure can be repeated as often as needed.

### 3 Internet Connectivity Dial-In Clients

Introduction	If you want to set up initial Internet connectivity using the Home Install Wizard on the Setup CD or the embedded Easy Setup, refer to the provided Installation and Setup Guide.						
Access methods	Depending on the configuration of the SpeedTouch™ you may have:						
		Direct access:					
		As soon as the initial cor WAN access is provided.	nfiguration is finished, imm	ediate and uninterrupted			
			t access, the remote organi vord on an Internet welcom				
	•	Dial-in access:					
		Access must be explicitly Remote Access Server (E	y established, that is by "di BRAS).	alling" into a Broadband			
			ITouch™ configuration, dia ted PPPoA or Routed PPPol				
Connection protocols	The applied connection protocol model depends on the service profile you selected to configure the SpeedTouch™ and should correspond with the Service Provider's requirements. If, for instance, your ISP provides PPPoE, you should configure PPPoE.						
	You can find more information on connection protocols in the Internet Connection Configuration Guide.						
Dial-in clients		re are different ways to dia oputer and your preference	al in, depending on the ope es.	rating system on your			
	Dial-in method:		canbeusedonfollowing operating system:	For more information, see:			
	Embedded PPP dial-in client:						
	1	Dial-in client on embedded pages	Windows, Mac, unix, other	"3.1 SpeedTouch™ Web Pages″			
	2	Windows XP/UPnP (Internet Gateway Device)	Windows XP	"3.2 Internet Gateway Device Control Agent" on page 35			

#### Embedded PPP dial-in The SpeedTouch™'s embedded PPP dial-in client allows you to establish an Internet clients connection for computers residing on your local network, using only one computer of the network to control the client. If this computer runs: Any Operating System you can always use the SpeedTouch™ Web pages. See "3.1 SpeedTouch™ Web Pages" on page 33 to proceed. Windows XP • you can use the Windows XP Internet Gateway Device Control Client. See "3.2 Internet Gateway Device Control Agent" on page 35 to proceed. Broadband host PPPoE You can also connect to the Internet using a Broadband PPPoE dial-in application. The PPP over Ethernet connection scenario provides PPP-like dial-in behaviour over dial-in clients the virtual Ethernet segment. To be able to use a broadband dial-in application on your computer for connecting

to the Internet, the SpeedTouch<sup>™</sup> needs to be configured for Bridged Ethernet or Routed PPPoE (with PPPoE relay) via the SpeedTouch<sup>™</sup> Home Install Wizard on the Setup CD or the embedded Easy Setup. .

If your computer runs	you can use
Windows XP	the Windows XP broadband dial-in client
Mac OS X	a Mac OS X broadband dial-in client
	a broadband PPPoE dial-in client provided by you Service Provider

Upon availability of OS-specific PPPoE dial-in client applications, the latter method is Operating System independent.

For PPPoE session connectivity from a Mac OS 8.6/9.x, a Windows 95/ 98(SE)/ME/2000 or a Linux system, a host PPPoE dial-in application is mandatory.

#### 3.1 SpeedTouch<sup>™</sup> Web Pages

#### Introduction

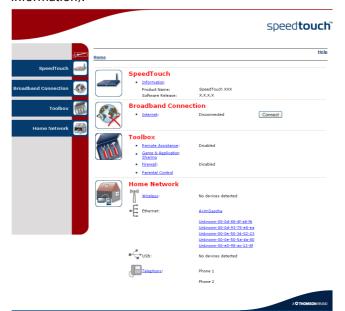

As the SpeedTouch<sup>™</sup> Web pages are controllable from any Operating System with an installed Web browser, the method to establish PPP sessions described later, can be used on any computer system.

For more information on Internet connection setup, refer to the provided Installation and Setup Guide.

# Starting an Internet session

Proceed as follows to start an Internet session:

1 Open a Web browser on your computer and browse to the SpeedTouch<sup>™</sup> Web pages (see "1.2.1 Access via the Web Interface" on page 7 for more information).

The SpeedTouch<sup>™</sup> home page appears by default.

Click **Connect** at the appropriate broadband connection.

You might be requested to enter your user name and password.

The SpeedTouch  ${}^{\rm T\!M}$  embedded PPP dial-in client establishes the Internet connection.

**3** Browse the Web.

2

Monitoring your Internet connection You can view and monitor your connection to the Internet as long as the session is running via:

- The SpeedTouch™ System Information page: see "5.3.1 Information" on page 52.
- The SpeedTouch™ Diagnostics task: see "5.4.1 Connectivity Check" on page 60.

**C** THOMSON

Terminating an Internet session

2

Proceed as follows to close an active PPP connection:

- **1** Go to the SpeedTouch<sup>™</sup> Web pages.
  - Click **Disconnect** at the appropriate broadband connection.

The SpeedTouch™ embedded PPP dial-in client closes the Internet connection. The Internet Link status changes to **Disconnected** and your computer is offline.

#### 3.2 Internet Gateway Device Control Agent

Introduction	Windows XP users can easily establish PPP sessions, thanks to the Windows XP Internet Gateway Device (IGD) Discovery and Control Client that allows you to control the SpeedTouch™ directly from you computer.			
	The IGD Control Client only allows to connect or disconnect a fully configured connection.			
Preconditions	Make sure that:			
	The following subcomponents of the Windows XP Networking Services are added to your Windows XP system:			
	<ul> <li>UPnP<sup>™</sup> (see " SpeedTouch<sup>™</sup> not detected by UPnP<sup>™</sup> or IGD Control Client" on page 109).</li> </ul>			
	<ul> <li>IGD Discovery and Control Client (see "Adding IGD Discovery and Control" on page 110).</li> </ul>			
	UPnP™ is enabled on your SpeedTouch™. To enable UPnP, see "5.5.3 Game & Application Sharing" on page 67.			
Starting an Internet	Proceed as follows to start an Internet session:			
session	1 In the Windows taskbar, click <b>Start</b> .			
	2 Select (Settings >) Control Panel.			
	The <b>Control Panel</b> window appears.			
	<b>3</b> Go to (Network and Internet Connections >) Network Connections.			
	The Network Connections window appears.			
	Network Connections       Image: Connection Sec: Conne			

) A East Ethe

You will find an **Internet Gateway** icon, representing the SpeedTouch<sup>™</sup> IGD Internet connection ability. Double-click the **Internet Connection** icon.

The SpeedTouch<sup>™</sup> embedded PPP dial-in client establishes the Internet connection. The **Internet Gateway** icon displays **Connected** and your computer is online.

**5** Open a Web browser and surf the Internet.

speed**touch**™

4

## Internet connection status

As long as the SpeedTouch<sup>™</sup> embedded PPP dial-in client is connected, you can view the connection status and some counters by double-clicking the **Internet Connection** icon in the **Network Connections** window.

🔋 Internet Connection Status 🛛 🔹 🛛 🥐				
General				
Internet Gatewa	y			
Status:		Connected		
Duration:		00:01:16		
Speed:		3.3 Mbps		
Activity Internet	Internet Gateway	My Computer		
Bytes: Sent: Received: Properties	3.579.037 4.155.677 Disconnect	5.606.288 12.582.862		
		<u>C</u> lose		

Terminating an Internet session

Proceed as follows to terminate an Internet session:

- 1 In the Windows taskbar, click **Start**.
- 2 Select (Settings >) Control Panel > (Network and Internet Connections >) Network Connections.
- **3** In the **Network Connections** window, right-click the **Internet Connection** icon and select **Disconnect** to close the session.

- You can also double-click the icon. Then the **Internet Connection Status** window will appear on which a **Disconnect** button is available to close the session.
- 4 The SpeedTouch<sup>™</sup> embedded PPP dial-in client will close the Internet connection. The **Internet Gateway** icon displays **Disconnected** and your computers are offline.

#### 4 Voice over IP

Voice over IP	Internet telephony or Voice over IP (VoIP) can be defined as the transfer of telephone calls over your Internet connection.
The SpeedTouch™ VolP solution	With your SpeedTouch™ you can make Internet and regular telephone calls using traditional analogue phones, connected to your SpeedTouch™.
	As VoIP signalling protocol your SpeedTouch <sup>™</sup> uses the Media Gateway Control Protocol (MGCP), RFC 3435.
Multi-line service	The voice service on your SpeedTouch™ provides additional lines without the need for additional copper pairs. The additional lines allow you to make and receive several internal and external Internet calls simultaneously.
Fax	You can also connect a fax machine to your SpeedTouch <sup>™</sup> in order to send and receive faxes over your Internet connection or over the traditional phone line. The following MGCP configuration parameters are provided by your ISP: IP address and port number (usually 2727) of the provider's call agent
Call agent	The provider's call agent contains the call control "intelligence". It creates, modifies and deletes connections in order to establish and control media sessions with other multimedia endpoints.

Telephony installation

#### 4.1 Telephony Setup

Telephone Internet (PSTN) Use a phone cable with RJ-11 connectors to: Wire the SpeedTouch<sup>™</sup> Phone port(s) to your phone(s) or fax. 1 2 If your SpeedTouch has a black-coloured port labeled "PSTN", you must connect this port to the telephone output of your DSL splitter to allow regular phone calls with the same telephone set. In the other case, no additional connections are needed. This is only required if you still want to make phone calls using the regular telephone line. Be aware that, if the PSTN port (if provided) is not wired to your telephone wall outlet or distributed filter, emergency calls are not always possible! As distributed filters are country-specific, you cannot use the device everywhere. Telephony configuration The telephony service might already have been configured on your SpeedTouch™ during initial setup.

The SpeedTouch™ is equipped to connect one or two analogue phones or faxes.

If not, follow the instructions below:

- Enable the telephony service
- Configure the telephony service

Enable the telephony	Pro	ceed as follows to enable the telephony service:
service	1	Go to the SpeedTouch™ Web pages.
		For more information, see "1.2.1 Access via the Web Interface" on page 7.
	2	In the menu, select <b>Toolbox &gt; Telephony</b> .
	3	In the upper right corner, click <b>Configure</b> .
	4	Select Service Enabled.
	5	Click Apply.
Configure the telephony	Pro	ceed as follows to configure the MGCP telephony service:
service	1	Go to the SpeedTouch™ Web pages.
	2	In the menu, select <b>Toolbox &gt; Telephony</b> .
	3	In the upper right corner, click <b>Expert configure</b> .
	4	Enter the IP address and the port number of the call agent, as provided by your ISP.
		[ <u>Administrator</u> ] <u>Overview</u>   <u>Details</u>   Expert Configure   <u>Help</u> <u>Home</u> > <u>Toolbox</u> > <u>Telephony</u>
		Telephony
		Service Configuration
		Call Agent: Call Agent Port: 2727
		Call Agent Port: 2727 Apply Cancel
		Appry Cancer
	5	Click Apply.

#### Verifying telephone connectivity

Proceed as follows to verify the voice connection:

- **1** Make sure the SpeedTouch<sup>™</sup> is turned on and ready for service.
- 2 Check whether your phone is properly attached to the SpeedTouch<sup>™</sup>.
- 3 Make sure the Internet telephony service is enabled and configured.
- 4 The VoIP Ready LED must be lit.

**5** Pick up your phone, wait for the dialling tone, and dial the number. If you dial a '#' after the phone number, the phone number will be called instantly.

The phone(s) attached to the SpeedTouch™ can receive incoming VoIP calls, as long as your SpeedTouch™ is turned on and the VoIP Ready LED is lit.

For calls over the regular phone line, your phones are line powered by the telephone company and can therefore always be reached, even if the modem is turned off.

# speed**touch**™

#### 4.2 Supplementary Telephony Services

# Supported telephony services

Depending on your provider's configuration, the following services will be available.

Service	Description
Call Hold	Allows you to put a call on hold, to dial another number, and to switch between the active and held call whenever you want, or to terminate the active or held call.
Call Waiting	Allows you to answer or reject an incoming call while you are in a conversation.
Call Transfer	Allows you to transfer a call to another person.
Conference Call (3 Parties)	Allows you to make a conference call.
Calling Line Identification Presentation (CLIP)	Allows you to see the phone number of the person who is calling you on your phone display. If you cannot take the call, the phone number is stored on the SpeedTouch™ Web pages, guaranteeing you do not miss important calls. CLIP will only work if CLIR is deactivated on the calling phone.
Calling Line Identification Restriction (CLIR)	Restricts the transmission of your phone number when you make a call, in order to protect your confidentiality. Your phone number will not appear on the screen of your partner. When this service is activated, your phone number will never be transmitted. To activate CLIR on call basis, see "Using the services on the phone" on page 41.
Forced FXO	Allows you to force the SpeedTouch™ to make the phone call over the PSTN, that is the regular telephone line.

For more information on how to use some of these services, see "Using the services on the phone" on page 41.

# Using the services on the phone

F

The following table explains how to use a telephony service. The commands depend on your provider's configuration and might be different from those described here. For more information, see your provider's documentation.

Make sure your phone is off-hook when you dial the commands.

If your phone does not have an *R* or another hook flash button, put down the hook for 1/2 second and then dial the command number.

To use the service:	Proceed as follows:		
Call Hold	To put person A on hold:		
	1 Dial <i>R</i> , <i>2</i> to put the call with person A on hold		
	2 Dial <i>R</i> , <i>1</i> to retrieve the call on hold.		
	To put person A on hold and set up a call to pers B:		
	<b>1</b> Dial <i>R</i> , <i>2</i> to put the call with person A on hold.		
	2 Wait for the dialling tone, and dial the number of person B.		
	<b>3</b> Dial <i>R</i> , <i>2</i> to switch back to person A.		
	Person B is put on hold.		
Call Waiting	You are in a phone conversation with person A while person B is calling you. The phone produces a waiting tone and - if CLIP is enabled and CLIR disabled - displays the number of person B.		
	Do one of the following:		
	• To reject the incoming call, dial <b>R</b> , <b>0</b> .		
	To terminate the first call and to switch to the waiting call, dial <i>R</i> , <i>1</i> .		
	If you do not want to terminate the first call, dial <i>R</i> , <i>2</i> to keep the first caller on hold while answering the second call.		
	<ul> <li>To return to person A while putting person B on hold, dial <i>R</i>, <i>2</i>.</li> </ul>		
	To return to person A while terminating the call with person B, dial R, 1.		
Call Transfer	You receive a phone call from person A and you want to transfer him to person B.		
	1 Dial <i>R, 2</i> .		
	<b>2</b> Wait for the dialling tone.		
	<b>3</b> Dial the number of person B.		
	Person B picks up the phone.		
	<b>4</b> Dial <i>R</i> , <b>4</b> to transfer the call.		
	5 Hang up.		

Conference Call (3 Parties)

To set up a conference call:

1

Command overview

The table below lists all standard service codes of the telephony services. These might be different on your SpeedTouch<sup>™</sup>, depending on your provider.

#### 5 SpeedTouch™ Web Interface

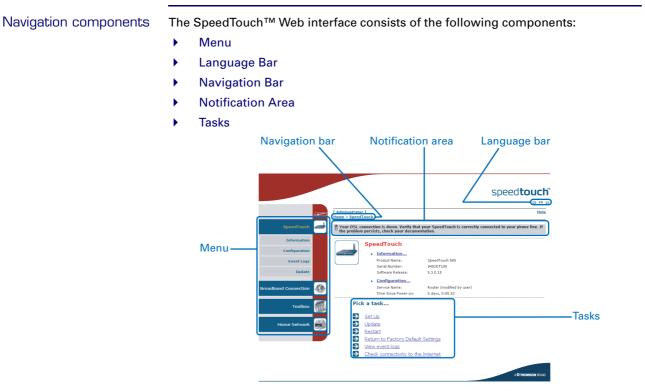

SpeedTouch™ documentation

#### Consult:

The SpeedTouch<sup>™</sup> Installation and Setup Guide for more information on setup and installation procedures.

## 5.1 Navigation

#### 5.1.1 Menu

Menu items

The menu is located on the left side of the page and consists of the following menu items:

- SpeedTouch: Provides basic information on the SpeedTouch™.
  - Broadband Connection: Allows you to view/configure your broadband connections.
  - Toolbox: Allows you to assign games or applications to a device and secure your Internet connection.
  - Home Network: Allows you to manage your local network.

Collapsing and You can collapse/expand the menu by clicking the arrow located at the top of the menu.

### 5.1.2 Language Bar

Language bar

The language bar is located under the SpeedTouch<sup>™</sup> logo and allows you to change the language of the SpeedTouch<sup>™</sup> Web interface.

The language bar will only be shown if more than one language is available.

# 5.1.3 Navigation Bar

Navigation bar	The navigation bar is located at the top of the page and allows you to:					
	<ul> <li>View the current user name.</li> <li>Click this name to change your password or switch to another user.</li> </ul>					
	View the current position on the SpeedTouch™ Web interface.					
	• Get context-related <b>Help</b> information.					
Display level	Depending on the page you are viewing, the following buttons will be available:					
	• <b>Overview</b> to view a summary of the current status or configuration.					
	<ul> <li>Details to view more detailed information on the current status or configuration.</li> </ul>					
	• <b>Configure</b> to change the current settings.					

## 5.1.4 Notification Area

7

Notification area

The notification area is located under the Navigation Bar and is used to display:

- Error messages, indicated by a red traffic light.
- Warnings, indicated by an orange traffic light.
- Information, indicated by a green traffic light.

If none of these events occur, the notification area will not be shown.

## 5.1.5 Tasks

Tasks

To allow a quick configuration of your SpeedTouch™, some pages may offer you a number of related tasks in the **Pick a task** list. These tasks will guide you to the page where you can perform the selected task.

### 5.2 Home

#### SpeedTouch™ home page

The SpeedTouch<sup>™</sup> home page gives you a short overview of all the configurable aspects of the SpeedTouch<sup>™</sup>:

# 5.3.1 Information

#### Information

The **Information** page summarizes important information on your SpeedTouch<sup>™</sup>. You may need this information when you contact your helpdesk.

#### System Information This page summarizes important information on your SpeedTouch. You may need this information when you contact your helpdesk.

 you contact your neipuesk.				
Product Name:	SpeedTouch XXX			
Serial Number:	0452DT108			
Software Release:	X.X.X.X			
Software Variant:	АА			
Boot Loader Version:	1.0.16			
Product Code:	35723430			
Board Name:	BANT-K			

#### 5.3.2 SpeedTouch™ Easy Setup

Easy Setup Wizard

The Easy Setup Wizard helps you to configure your SpeedTouch™ Internet connection.

Proceed as follows to configure the SpeedTouch<sup>™</sup> using the SpeedTouch<sup>™</sup> Easy Setup wizard:

- 1 In the left menu, click **SpeedTouch**.
- 2 In the **Pick a task** list, click **Set up**.

The **Easy Setup** wizard will now guide you through the configuration of your SpeedTouch<sup>TM</sup>.

#### 5.3.5 Back up & Restore

Introduction

- The Back up & Restore page allows you to:
- Save your current configuration.
- Restore a previously saved configuration.

#### Backup & Restore

This page enables you to save and restore the configuration of your SpeedTouch. Follow instructions below...

Backup current configuration

In order to store the current configuration of your SpeedTouch, click on the `Backup Configuration Now...' button. You will be prompted by your web browser to store the configuration file locally on your hard disk. Choose a location and store the file on your computer.

Backup Configuration Now...

Restore saved configuration

You can restore a configuration file you have previously stored on your computer.

Click on `Browse', choose the configuration file you want to restore on your SpeedTouch and click on `Restore Configuration Now...' to restore the configuration.

onfiguration File:	Browse

Restore Configuration Now...

Accessing the Backup Pro & Restore page 1

Proceed as follows:

C

- 1 In the **SpeedTouch** menu, click **Configuration**.
- 2 Click Configure.
- 3 In the Pick a task list, click Save or Restore Configuration.

Saving your current configuration

Proceed as follows:

- **1** Click Back up Configuration Now.
- 2 Click Save.
- 3 Choose a location to save your backup file and click **Save**.

Restoring a previously saved configuration

Proceed as follows:

- 1 Click Browse.
- 2 Select the configuration file you want to restore and click **Open**.

3 Click Restore Configuration Now.

The SpeedTouch<sup>™</sup> loads your configuration and restarts.

At the end of the procedure, the SpeedTouch<sup>™</sup> returns to the Home page.

#### 5.3.6 Reset to Factory Defaults

Introduction

The **Reset to Factory Defaults** page allows you to reset the SpeedTouch<sup>™</sup> to return to the initial configuration of your SpeedTouch<sup>™</sup>. All your changes will be deleted.The following message appears:

Yes, reset my SpeedTouch No

Resetting the SpeedTouch™ factory defaults

- Proceed as follows:
  - In the left menu, click SpeedTouch.
- 2 In the Pick a task list, click Return to Factory Default Settings.
- 3 Click Yes, reset my SpeedTouch.

1

If you reset your SpeedTouch<sup>™</sup> to factory default settings, all active connections will be disconnected.

## 5.3.7 Event Logs

Event Logging

The **Event Logs** page summarizes the last events recorded on your SpeedTouch™.

	<b>t Logging</b> e summarizes the last events th	at have been recorded on your SpeedTouch. Choose a displa
Category:		LAN
Recorded Events		
	Time	Message
	00:23:11 (since last boot)	DHCS server up
	00:23:10 (since last boot)	DHCS server went down
	00:00:04 (since last boot)	DHCS server up
	00:00:03 (since last boot)	WIRELESS interface turned on.
	00:00:03 (since last boot)	WIRELESS automatic channel selection done (channel = 1)

#### **Recorded Events**

The **Recorded Events** table gives you an overview of the last event logs that have been recorded since the SpeedTouch<sup>™</sup> was turned on. The first column of the table indicates the importance of the event log.

Indicator	Description
8	Informational
8	Warning
8	Error

Category

The **Category** list allows you to filter the events shown in the **Recorded Events** table. For example, by clicking **Security** you can view all security related events, for example generated by the SpeedTouch<sup>™</sup> firewall.

#### 5.4 Broadband Connection

The Broadband Connection menu

#### The Broadband Connection menu consists of following menu items:

DSL Connection

Internet Services

The Broadband Connection page The **Broadband Connection** page gives you a short status overview of the connections configured on the SpeedTouch<sup>™</sup>.

				speed <b>touch</b> "

		Primary DNS: Secondary DNS:	10.50.2.20 10.50.2.21

If you configured a dial-up connection you can establish/terminate the connection by clicking **Connect/Disconnect**.

Enabling Remote Assistance The **Remote Assistance** page allows you to make your SpeedTouch<sup>™</sup> accessible for remote support.

Remote Assistance Remote assistance is currently disabled. By clicking on the 'Enable Remote Assistance' button your SpeedTouch will be accessible from your broadband connection. After 20 minutes of inactivity, or on reboot, remote assistance will be automatically disabled.

Provide the following parameters to your ISP:

URL:	https://101.101.101.39:51003	
Username:	tech	
Password:	yhxj3mtq	
	Enable Remote Assistance Qu	uit

If you want to enable remote assistance, you must be connected to the Internet.

Proceed as follows to use remote assistance:

1 If necessary, type a password in the **Password** box.

- 2 Click Enable Remote Assistance.
- **3** Pass the information listed under:
  - URL
  - Username
  - Password

to your technical support, in order for them to be able to access your SpeedTouch  ${}^{\rm T\!M}$  .

## Terminating remote assistance

The remote assistance session ends:

- if the technical support disables remote assistance.
- after 20 minutes of inactivity.
- ▶ after restarting your SpeedTouch<sup>™</sup>.

### 5.5.2 Telephony

Introduction	The SpeedTouch™ is equipped with:				
	Two Phone ports allowing you to connect up to two phones for making phone calls over the Internet.				
	<ul> <li>One PSTN port allowing you to make phone calls over the Public Switched Telephone Network (PSTN) network.</li> </ul>				
	For more information on how to set up your Voice over IP (VoIP) network, consult the User's Guide on the SpeedTouch™ Setup CD.				
Overview	On this page you can view information on your current VoIP configuration.				
	Telephony				
	Service Configuration				
	Service Enabled: Yes

### 5.5.3 Game & Application Sharing

Overview

The **Overview** page summarizes the applications or games installed on a particular local host on your network, for which the SpeedTouch<sup>™</sup> should accept inbound initiated connections coming from the Internet.

Configure

•

On the **Configure** page, you can:

Select **Use UPnP** to enable UPnP on the SpeedTouch<sup>™</sup>. UPnP provides NAT-Traversal: UPnP aware applications on a PC will automatically create Hyper-NAT entries on the SpeedTouch<sup>™</sup> for incoming traffic on the protocol ports this type of traffic needs. As a consequence these applications are able to traverse the SpeedTouch<sup>™</sup> without the need for extra and manual configuration.

UPnP is an architecture for transparent peer-to-peer connectivity of computers, intelligent appliances, and (wireless) devices. It enables seamless operation of a wide range of games and messaging applications.

 For security reasons you are able to configure the UPnP policy towards Windows XP and UPnP aware applications and Operating Systems.

In case you select the **Use Extended Security** check box, only limited UPnP operation between a host running MS Windows XP and the SpeedTouch<sup>™</sup> is allowed: A local host is:

- ▶ NOT allowed to connect/disconnect the SpeedTouch<sup>™</sup> Internet Gateway Device (IGD) connection.
- Allowed to add/delete Hyper-NAT entries only for its own IP address, not for other local hosts.

If you clear the **Use Extended Security** check box, all UPnP- and IGD-based communication between any local host and the SpeedTouch<sup>™</sup> is allowed.

Lotus Notes

Apply Cancel

#### Game or Application Definition

A game or application is made of one or more TCP/UDP port ranges. Each incoming port range can be translated into a different internal (local network) port range. Port ranges can be statically assigned to devices or dynamically assigned using an outgoing trigger.

Protoco	ol Port Range	Translate To	Trigger Protocol	Trigger Port	
Any	1352 - 1352	1352 - 1352	-	-	Edit Delete
Any 💌	1 <b></b> to		Any		Add

#### Adding a Port Translation rule

Proceed as follows:

- 1 Click the **Edit** link of the TCP/UDP port definition of the game or application.
- 2 In the **Protocol** list, click the protocol the game or application uses.
- 3 In the **Port Range** box, type the port range the game or application uses.
- 4 In the **Translate To** box, type the port range to which the SpeedTouch<sup>™</sup> has to translate the ports specified under **Port Range**.
- **5** If you want to make a dynamic translation rule you must specify a trigger protocol and port.

6 Click Apply.

### 5.5.6 New Game or Application

Creating a new game or application

Proceed as follows:

- 1 In the Toolbox menu, click Game & Application Sharing.
- 2 In the **Pick a task** list, click **Create a new game or application**. The following window appears:

	New Game or Application Enter the name of the new game or application.					
	Name:		New_entry	]		
	Select	how you want to defin	e the new game or application.			
		Clone Existing Game or ABC (Another Bittoren				
	0.1	Manual Entry of Port Ma	aps			

- **3** Type the name of the game or application in the **Name** box.
- 4 Click:
  - **Clone Existing Game or Application** if you want to start from the port mappings of the selected game or application.

Next Cancel

• **Manual Entry of Port Maps** if you want to manually configure the port mapping for this game or application.

The SpeedTouch<sup>™</sup> creates the game or application and takes you to the Game or Application Definition page to configure the port mappings for this game or application.

**5** Enter the necessary port mappings and click **Add**.

### 5.5.7 Parental Control

Parental Control	The SpeedTouch™ allows you to block/allow particular Web sites:
	Based on the Web site's URL.
	As within a Web site lots of references can be made to other URLs, it is recommended to use this feature in combination with content based filtering.
	<ul> <li>Based on the Web site's content.</li> </ul>
	<ul> <li>By redirecting a Web site to another Web site.</li> </ul>
	If your administrator account is configured as default user, make sure you configure a password for this account or change the default user. Otherwise users on your local network can browse to your SpeedTouch <sup>™</sup> to disable your filtering rules.
	For more information, see "5.5.14 User Management" on page 85 and "5.5.16 Change Default User" on page 88.
Overview	The <b>Overview</b> page displays:
	The current Address Based Filtering rules.
	The current Content Based Filtering configuration. To view which content types are blocked/allowed, click Details. For more information, see "5.5.9 Content Level" on page 77.
	Address based filtering rules have priority over content based filtering rules.
Configure	On the <b>Configure</b> page, you can:
	<ul> <li>Deny access to a specific web site.</li> </ul>
	<ul> <li>Allow access to a specific Web site.</li> </ul>
	Redirect a Web site.
	Configure content based filtering settings.
Content levels	The following content levels are available:
	<ul> <li>All: Allow all categorized Web sites.</li> </ul>
	<ul> <li>Legal: Allow all except illegal, extreme, spam and spyware Web sites.</li> </ul>
	<ul> <li>Teenagers: Block illegal, adult, extreme, online ordering/gambling, spam and spyware Web sites.</li> </ul>
	<ul> <li>Children: Only allow children-save Web sites.</li> </ul>
	<ul> <li>BlockAll: Block all categorized Web sites.</li> </ul>

	A content category/group is blocked by Content Based Filtering and you want to make an exception. For example: you are blocking <b>Finance / Investment</b> content but you want to allow access to "netbanking.bank.com".			
	oceed as follows:			
	Type the URL of the Web site you want to allow (for example "netbanking.bank.com") in the <b>Web Site</b> box.			
	Click Allow in the Action list.			
	Click Add.			
Redirect a Web site	oceed as follows:			
	Type the URL of the Web site you want to redirect (for example "cracks.am") in the <b>Web Site</b> box.			
	Click <b>Redirect</b> in the <b>Action</b> list.			
	Type the URL of the Web site you want to redirect to (for example "mycompany.com/internetpolicy.htm") in the <b>Redirect</b> box.			
	Click Add.			

Redirecting all Web sites

#### Proceed as follows:

- **1** Type "\*" in the **Web Site** box.
- 2 Click **Redirect** in the **Action list**.
- **3** Type the URL of the Web site you want to redirect to (for example "mycompany.com/internetpolicy.htm") in the **Redirect** box.
- 4 Click Add.
- **5** Type the URL of the Web site you want to redirect to (for example "mycompany.com/internetpolicy.htm") in the **Web Site** box.
- 6 Click Allow in the Action list.
- 7 Click Add.

Configure content based filtering settings

#### Under Content Based Filtering you can:

- Enable/disable content based filtering.
- Allow/block uncategorized Web sites.
- Select a content level in the Content Level list.

speed**touch**™

To change a content level definition, click the **Edit** link of the content level you want to change. For more information, see "5.5.9 Content Level" on page 77.

### 5.5.8 Web Filtering Activation

Accessing this page	Pro	ceed as follows:
	1	In the Toolbox menu, click Parental Control.
	2	In the Pick a task list, click Activate Web Filtering License.
Web Filtering Activation	Thi	s page you can:
page		Activate a Web Filtering evaluation license.
	•	Activate a free 30-days Web Filtering evaluation license.
Standard license	Pro	ceed as follows:
activation	1	Click Standard.
	2	In the License Key box, type the license key provided by your ISP.
	3	Click Apply.

### 5.5.9 Content Level

Accessing the Content Level page

Proceed as follows:

- 1 In the Toolbox menu, click Parental Control.
- 2 Click Configure.
- 3 Click the Edit link of the content level you want to edit.

## Overview The **Content Level** page gives you an overview of the different categories and their rules.

The following icons indicate whether the content type is allowed or not.

lcon	Description
V	The category/group is allowed.
×	The category/group is not allowed.
×	The group is partly allowed.

#### Configure

This page allows you to change:

- The content level name.
- The content level description.
- The content level configuration.

### 5.5.10 New Content Level

Accessing the New Content Level page	On this page you to create a new content level. Proceed as follows to access this page:		
	1 In the Toolbox menu, click Parental Control.		
	2 In the upper right corner, click <b>Configure</b> .		
	3 In the <b>Pick a task</b> list, click <b>Create a new content level</b> .		
Procedure	To apply a new content level, you must perform the following actions:		
	1 Content level creation		
	2 Content level configuration		
	3 Content level definition		
	4 Content level activation		
	You can create up to 16 content levels.		
Content level creation	Proceed as follows:		
	1 In the <b>Name</b> box, type a name for the new content level.		
	2 In the <b>Description</b> box, type a short text to describe what this security level will do.		
	3 Click Next.		
	The <b>Configuration</b> section appears.		
Content level	Proceed as follows:		
configuration	1 Click:		
	Clone Existing Level to start from a previously created content level.		
	If no levels have been defined before, this option will not be shown.		
	Black List to allow all Web sites by default.		
	White List to block all Web sites by default.		
	2 Click Next.		

The **Content level definition** section appears.

Content level definition	Only Web sites that match the selected content level will be allowed. Proceed as follows:			
	1	If you want to:		
		<ul> <li>Allow a category: Select the check box next to the category name.</li> </ul>		
		<ul> <li>Allow an entire group: Select the check box next to the group name.</li> </ul>		
		<ul> <li>Block a category:</li> <li>Clear the check box next to the category name.</li> </ul>		
		<ul> <li>Block an entire group:</li> <li>Clear the check box next to the group name.</li> </ul>		
	2	Click Apply.		
Content level activation	То а	activate your new content level:		
	1	In the Toolbox menu, click Parental Control.		
	2	In the upper right corner, click <b>Configure</b> .		
	3	In the Content Level list, select your new content level.		
	4	Click Apply.		

The new content level is now active.

### 5.5.11 Firewall

About the firewall	The firewall allows you to secure traffic from and to the SpeedTouch™. There are different security levels, depending on the degree of security you need.
Overview	The <b>Overview</b> page summarizes the overall security policy configured on your SpeedTouch™.
Configure	On the <b>Configure</b> page you can select the security level of the SpeedTouch™.

Security	/ Levels
OCOUI IU	

Select one of following security levels:

#### BlockAll:

All traffic from and to the Internet is blocked. Game and Application Sharing is not allowed by the firewall.

#### Standard:

All outgoing connections are allowed. All incoming connections are blocked, except for inbound connections assigned to a local host via Game and Application Sharing.

 Disabled: All in- and outgoing traffic is allowed to pass through your SpeedTouch<sup>™</sup>,

	To view the details of the currently active security level:
level	In the Toolbox menu, click Firewall.
	2 Click the <b>Details</b> link.
	Following information is provided per rule that is part of the security level
	• The name of the rule
	• The Action that is applied on the traffic when the rule is valid
	The Source and Destination interface or IP address (range) to which the rule applies
	The protocol or SpeedTouch <sup>™</sup> Service for which the rule applies.
	• The number of <b>Hits</b> (number of times that the rule was applied to traffic).
Creating a new security	Proceed as follows:
level	1 In the Toolbox menu, click Firewall.
	2 In the upper right corner, click <b>Configure</b> .
	3 In the Pick a task list, click Create a new Security Level.
	4 In the <b>Name</b> box, type a name for the new security level.
	5 Choose an existing security level to clone from.
	6 Click Apply.
Editing a security level	Proceed as follows:
	In the Toolbox menu, click Firewall.
	2 In the upper right corner, click <b>Configure</b> .
	3 Select a security level, and then click the <b>Edit</b> link.
	The firewall settings of the selected security level appear.
	4 You can:
	Select a row using the Edit link to modify the security rule.
	Click Add to create a new security rule.
	5 Edit or define following parameters of the rule:
	The Name of the security rule
	The Source Interface and IP Address (range)
	Use <b>Any</b> as IP address in case all traffic for the interface should be parsed.
	Or you can type a <b>User-defined</b> IP address (range).
	The Destination Interface and IP Address (range)
	Use <b>Any</b> as IP address in case all traffic for the interface should be parsed.
	Or you can type a <b>User-defined</b> IP address (range).
	The Service type of the traffic; this can be a protocol (dns, smtp,) or a specific SpeedTouch™ system service.

speed**touch**™

- 6 Select an **Action** that should be done on traffic for which the security rules applies:
  - Accept: to allow the traffic to pass
  - **Deny**: to drop the traffic (without notification)
  - Count: to let the traffic pass, but count it (Hits)
- 7 Click Apply.

### 5.5.12 Intrusion Detection

#### Intrusion Detection

Your SpeedTouch<sup>™</sup> protects your network against malicious intrusions. The **Intrusion Detection** page shows you the intrusions you are protected against.

The **Protected Intrusions** table shows the number of times the SpeedTouch<sup>™</sup> actively protected your network against each intrusion since last statistics reset.

### 5.5.13 Dynamic DNS

Dynamic DNS	The Dynamic DNS service allows you to assign a dynamic DNS host name (for example john.dyndns.org) to a broadband connection even if it is using a dynamic IP address. As soon as the device gets a new IP address, the dynamic DNS server updates its entry to the new IP address.			
Overview	Click <b>Overview</b> to names, interface		ynamic DNS clients with	their name, host
Configure	On the <b>Configure</b> connection. Proc		n a Dynamic DNS host n	ame to a broadband
	1 Create an a	ccount at the Dynam	ic DNS service of your ch	oice, for example:
	• <u>www.</u>	<u>dyndns.org</u>		
	• <u>www.</u>	no-ip.com		
	• <u>www.</u>	dtdns.com		
	2 On the Dyn	amic DNS page, click	Configure.	
	3 Select the E	nabled check box.		
		Dynamic DNS Ser	vice	
		<ul> <li>Configuration         Enabled:     </li> </ul>		
		Interface:	Internet	<b>T</b>
		Username:	, MyName	
		Password:		
		Confirm password:		
		Service:	qnudip	•
		Host:	MyDomainName	
				Apply
	4 If necessary	, click the broadband	l connection to which yo	u want to assign the

- Dynamic DNS hostname in the **Interface** list.
- **5** Type the user name and password of your Dynamic DNS service account in the corresponding fields.
- 6 In the **Service** list, click your Dynamic DNS service.
- 7 In the **Host** box, type the host name you want to assign to this interface (for example myspeedtouch.dyndns.org).
- 8 Click Apply.

### 5.5.14 User Management

#### Overview

The **Overview** page gives you an overview of the currently configured users and their privileges.

This page provides you with information regarding the users configured on your SpeedTouch.

Click the name of a user to edit his user account.

### Local User Data

**User Management** 

The table below shows the configured users who are able to access your SpeedTouch. You need to configure user privileges if you want to differentiate between people using your SpeedTouch. The current privileges of the user are mentioned in the privileges column.

Username	Privileges	Default User		
Administrator	Administrator	$\checkmark$	Edit	
<u>Jon</u>	User		<u>Edit</u>	<u>Delete</u>
Melissa	User		Edit	<u>Delete</u>
				Ad

#### Configure

•

On the **Configure** page, you can:

- Click Add to create a new user account.
  - Click Edit to change a user account.
- Click Delete to remove a user.

#### Types of users

The table below shows the types of users and their privileges:

User	Privileges
root	This is the root (master) account. This user has all privileges without any exceptions or limitations.
SuperUser	This user can perform any service via any access channel from any access origin.
TechnicalSupport	This user can perform any service via any access channel from WAN origin only.
Administrator	This user can perform any service via any access channel from LAN or Local origin only.
LAN_Admin	This user can perform only LAN related configurations via any access channel from any origin.
Poweruser	This user has access to the GUI (Service/overview page) via HTTP or HTTPS access channel from LAN origin only.

User	Privileges
WAN_Admin	This user can perform only WAN related configurations via any access channel from any origin.
User	This user has access to the GUI (Overview pages, remote assistance) via HTTP or HTTPS access channel from LAN origin only.
Guest	This user does not have any privileges.

### 5.5.15 Edit User

Editing a user account

Proceed as follows:

1 In the Toolbox menu, click User Management.

2 Under Local User Data, click the name of the user you want to edit.

The Edit User page appears. On this page, you can:

speed**touch**™

- Click Reset Password to reset the password of the selected user to the user name. So, if you reset the password of John his password will be "John".
- Change the administration rights of the selected user.

You can not change the administration rights of the account you are logged on with.

### 5.5.16 Change Default User

The Default User page		this page you can change the default user. If users browse to the SpeedTouch <sup>™</sup> b pages, they will be automatically logged on with this account. To allow users to automatically log on under this account, this default user account must be configured with a blank password.
Changing the default user	Pro 1 2 3	oceed as follows: In the <b>Toolbox</b> menu, click <b>User Management</b> . In the <b>Pick a task</b> list, click Set the default user. The <b>Change Default User</b> page appears.
		Change Default User         This page allows you to change the default user. The default user is the user whose settings will be chosen as the default login settings.         • Change Default User         User Name:         Jon         Change Default User

- 4 In the **User Name** list, click the name of the new default user.
- **5** Click **Change Default User** to confirm your choice.

Apply Cancel

### 5.5.17 Add User

Adding users

- Proceed as follows: **1** In the **Toolbox** menu, click **Us** 
  - In the Toolbox menu, click User Management.
     In the Pick a task list, click Add new user.
  - **3** The **Add User** page appears.

	You're only allowed to add a user who has privileges which are the assword of the new user will be the same as the account name.
User definition	
Name:	New_user
Administration Privileges:	Administrator

- 4 Under User definition you can configure:
  - The name of the new user.

The password of the new user will be equal to the user name; for example if the user name is John Doe, the password will be John Doe. Also when resetting a user, the password will be changed into the user name.

• The administration rights of the new user.

speed**touch**™

You can only add users with less than or equal administration rights as yourself.

### 5.6 Home Network

Home Network Menu	<ul> <li>The Home Network menu consists of the following items:</li> <li>Devices Allows you the view/configure the devices detected on your local network.</li> <li>Interfaces Allows you to view/configure the interfaces that are available on the SpeedTouch<sup>™</sup>.</li> </ul>
The Home Network page	The <b>Home Network</b> page gives you an overview of your SpeedTouch™ network.
Viewing (wireless) client information	<ul> <li>If you click on a (wireless) client you can:</li> <li>View the (wireless) client's network settings.</li> <li>Configure the (wireless) client's network settings by clicking Configure.</li> </ul>
Viewing Telephony information	If you click <b>Telephony</b> you can view/change your VoIP configuration. For more information, see "5.5.2 Telephony" on page 66.

### 5.6.1 Devices

#### Overview

The **Overview** page gives you an overview of the devices that are currently connected to the SpeedTouch<sup>™</sup> network. Click on a device name to get more information on a specific device.

	Local Network Devic	ces				
	<ul> <li>Detected Device(s)</li> </ul>	Detected Device(s)				
	The table below contains the on a device name to get mo		detected on your local network. Click			
	Name	IP Address	Interface			
	🕠 speedtouch	192.168.1.254				

The detected device 'dsldevice' is the SpeedTouch™ itself.

#### Configure

The **Configure** page gives you an overview of the devices that are currently connected to the SpeedTouch<sup>™</sup> network.

If you want to:

F

- Get more information on a specific device, click on the name of the device. See "5.6.2 Device Settings" on page 92 for more information.
- Edit a device from the Detected Device(s) list, click Edit.
- > Delete a device from the Detected Device(s) list, click Delete.
  - Once a device connects to the SpeedTouch™ network, it will remain listed in the Detected Device(s) list until you delete it.

### 5.6.2 Device Settings

Accessing the device settings page	Proceed as follows:	
	1	In the Home Network menu, click Devices.
	2	In the <b>Detected Device(s)</b> list, click the name of the device you want to view.
Overview	The	• Overview page displays the following items:

- Information allows you to view:
  - Status shows whether the device is currently connected to the SpeedTouch<sup>™</sup> network.
  - **Type** shows the device type.
  - **Connected To** shows the interface to which the device is currently connected.
- Addressing allows you to view:
  - Physical Address shows the MAC address of the device.
  - IP Address Assignment shows whether the device is using a static or dynamic IP address.
  - IP Address shows the current IP address of the device.
  - Always use the same address indicates whether the wireless client has a static DHCP lease or not.
  - **DHCP Lease Time** displays the time for which the wireless client can use this IP address.
- Connection Sharing:

Gives you an overview of the games or services that are currently assigned to this device. Click the name of the game or service to view the used port mappings.

For more information, see "5.5.5 Game or Application Definition" on page 70.

#### Configure

- The **Configure** page allows you to:Change the device information.
- Allow a game or service running on this device to be initiated from the Internet.

	PC:	L		
	•	Information		
		New Name:	PC1

### 5.6.3 Assign Public IP

Introduction

On this page you can assign the public IP address of your Internet Connection(s) to a specific device on your local network. You might want to do this if:

- You do not want to use the Network Address Translation engine of your SpeedTouch™.
- This device is running server applications (Web server,...) and you want it to be accessible from the Internet.

You can also achieve this by creating a port mapping for the specified server, as described in "5.5.3 Game & Application Sharing" on page 67.

• This device has to be considered as the unique access point to your local network (DMZ).

Be a all s

7

Be aware that the device to which you assign the public IP address will lose all security offered by the SpeedTouch™.

Assigning the public IP address to a device

Proceed as follows:

- 1 In the **Home Network** menu, click **Devices**.
- 2 In the Pick a task list, click Assign the public IP address of a connection to a device.
- 3 Click the Edit link of your Internet connection.
- 4 In the **Device** list, select the device you want to assign the public address to.

Assign the public IP address of a connection to a LAN device This page allows you to assign the public IP address of your Internet Connection(s) to a specific device on your local network...

You might want to do this if:

<ul> <li>You encounter issues with some applications through the Network Address Tr</li> </ul>	anslation engine o	of
your SpeedTouch. - ೧೯೯೭ರ ಸಂಕ್ಷಣಗಳ ಅತರಾಜಗಾಗಿಗೆ ಸೇವರ್ಷಗಳನ್ನು ಇದರತೆಂದ ಚಾರ್ವಸವರ್ಗಿನನೆಗಳನುಗೊಡೆಗೆ ನಾಲಾದ ಆದ್ರ್ ಸಂಗಡಲವರು ಭಾಗಗಿಗೆ ಗಿ	· - · · · · · · · · · · · · · · · ·	
<ul> <li>This device has to be considered as the unique entry to your local network (DMZ).</li> </ul>		

nternet Service	Device	Ir
iternet	YourLaptop Apply Cancel	Ir

5 Click Apply.

The SpeedTouch<sup>™</sup> prompts you to make some adjustments as a result of the new configuration.

- 6 Click OK.
- 7 Release and renew the IP address of the device.

For more information, see your operating system's user guide or help.

8 If necessary, reassign server applications to this device.

## 5.6.5 Access Point Settings

Availability	This page is only available on SpeedTouch™ devices equipped with a wireless access point.	
Accessing the Access Point settings	<ul> <li>Proceed as follows:</li> <li>1 In the left menu, click Home Network.</li> <li>2 Under Wireless, click the name of the Access Point you want to view or configure.</li> </ul>	
	The Access Point names have the following format: "WLAN: " + Network Name, for example "WLAN: SpeedTouch123456".	
Overview	The <b>Overview</b> page displays a brief overview of the current configuration.	
Details	The <b>Details</b> page displays a more detailed overview of the current configuration. Under Configuration, the following fields are available:	
	<ul> <li>Interface Enabled: Indicates whether the wireless interface is enabled or disabled.</li> </ul>	
	<ul> <li>Physical Address: Displays the Base Service Set Identifier (BSSID) of the selected Access Point.</li> </ul>	
	<ul> <li>Network Name (SSID): Displays the network name of your WLAN.</li> </ul>	
	Interface Type: Displays one of the following interface types:	
	<ul> <li>802.11b</li> <li>Only stations that are configured in 802.11b mode can associate.</li> </ul>	
	802.11b(legacy)/g This is a special compatibility mode for 802.11b/g and is in fact designed for older types of b-clients. Use this mode if you are experiencing problems with wireless clients that connect to the SpeedTouch <sup>™</sup> Access Point.	
	<ul> <li>802.11b/g</li> <li>Only stations that are configured in 802.11b/g mode can associate.</li> </ul>	
	<ul> <li>802.11g</li> <li>Only stations that are configured in 802.11g mode can associate.</li> </ul>	
	<ul> <li>Actual Speed: Displays the current transmission speed.</li> </ul>	
	<ul> <li>Channel Selection:</li> <li>Displays whether you select a fixed channel yourself or the SpeedTouch<sup>™</sup> selects a channel for you.</li> </ul>	
	Region:     Displays your region.	
	<ul> <li>Channel: Displays the channel that is currently used by the Access Point.</li> </ul>	

#### Allow multicast from Broadband Network:

Displays whether you to allow/deny multicast messages from the Internet.

Large bandwidth streams, like video streams, have a large impact on your wireless performance.

WMM:

Displays whether WMM is enabled or disabled.

WMM or Wi-Fi MultiMedia enhances QoS at wireless driver level. It provides a mechanism to prioritise wireless data traffic to and from the associated (WMM capable) stations.

Under **Security** the following fields are available:

#### Broadcast Network Name:

By default the SpeedTouch<sup>™</sup> broadcasts its network name, allowing you to easily recognise your wireless network in the list of available networks. Once you have configured your wireless clients, it is recommended to disable this feature by clearing this check box.

Allow New Devices:

Allows you to change the access control used by the SpeedTouch™.

Encryption:

Allows you to select an encryption level for your wireless network. The following encryption methods are supported by the SpeedTouch<sup>™</sup>:

- The Wired Equivalent Protocol (WEP)
- WPA-Pre Shared Key (WPA-PSK)

The default WEP key and the default WPA key are printed on the SpeedTouch™ bottom label.

Before configuring the SpeedTouch<sup>™</sup> encryption, make sure you know which encryption methods are supported by your wireless client.

Configure On the **Configure** page, you can change the configuration details displayed on the **Details** page.

WEP The Wired Equivalent Privacy (WEP) algorithm protects wireless communication from eavesdropping.

WEP relies on a secret key that is shared between the wireless client (for example a laptop with a wireless Ethernet card and the SpeedTouch<sup>™</sup>. The fixed secret key is used to encrypt packets before they are transmitted. Meaning during transmission between client and AP ("in the air") the information in the packets is encrypted.

If your wireless client(s) support(s) WPA-PSK we recommend you to use WPA-PSK, because WEP encryption has been proven to have some security issues.

To enable WEP:

- **1** Select Use WEP Encryption
- 2 In the **WEP Key Length** list, click the desired Data Security level (either 64-bit or 128-bit and Alphanumeric or Hexadecimal).
- 3 In the Encryption key box, type a Network key of your choice. In case of:
  - 64 bit, Alphanumeric: The 40-bit Network key must consist of 5 alphanumeric characters.
  - 64 bit, Hexadecimal: The 40-bit Network key must consist of 10 hexadecimal digits.

speed**touch** 

- 128 bit, Alphanumeric: The 104-bit Network key consists of 13 alphanumeric characters.
- 128 bit, Hexadecimal: The 104-bit Network key consists of 26 hexadecimal digits.
- 4 Click Apply to immediately apply your changes.
- **5** Configure your wireless client(s) with the same settings.
- WPA-PSK The SpeedTouch<sup>™</sup> supports WPA-PSK, which offers three advantages over WEP:
  - Authentication via a 4-way handshake to check whether the Pre-Shared Keys (PSKs) are identical.
    - Stronger encryption types:
      - Temporal Key Integrity Protocol (TKIP) (default): Instead of using a fixed WEP key, TKIP uses in pairs temporary session keys which are derived from the PSK during the 4-way handshake. For each packet it uses a different key. TKIP also provides a message integrity check (MIC) and a rekeying mechanism (in seconds).
      - Advanced Encryption Standard (AES): State-of-the-art encryption; can only be used if all wireless devices in your WLAN support AES.
  - Message Integrity Check (MIC). Which is a strong mathematical function in which the recipient and transmitter each compute and compare the MIC. If they don't match it is assumed that a third person has been trying to read the data.

Proceed as follows to enable WPA-PSK:

- 1 Select Use WPA-PSK Encryption.
- 2 In the **WPA-PSK Encryption Key** box, type a pass phrase (also known as Preshared key) of your choice. The pass phrase must consist of 8 to 63 ASCII characters or 64 HEX digits.
- 3 In the WPA-PSK Version list, click the desired WPA-PSK version.

Depending on the WPA-PSK version you choose, one of the following WPA-PSK encryption will be set automatically:

- WPA: TKIP
- WPA2: AES
- WPA+WPA2: TKIP+AES

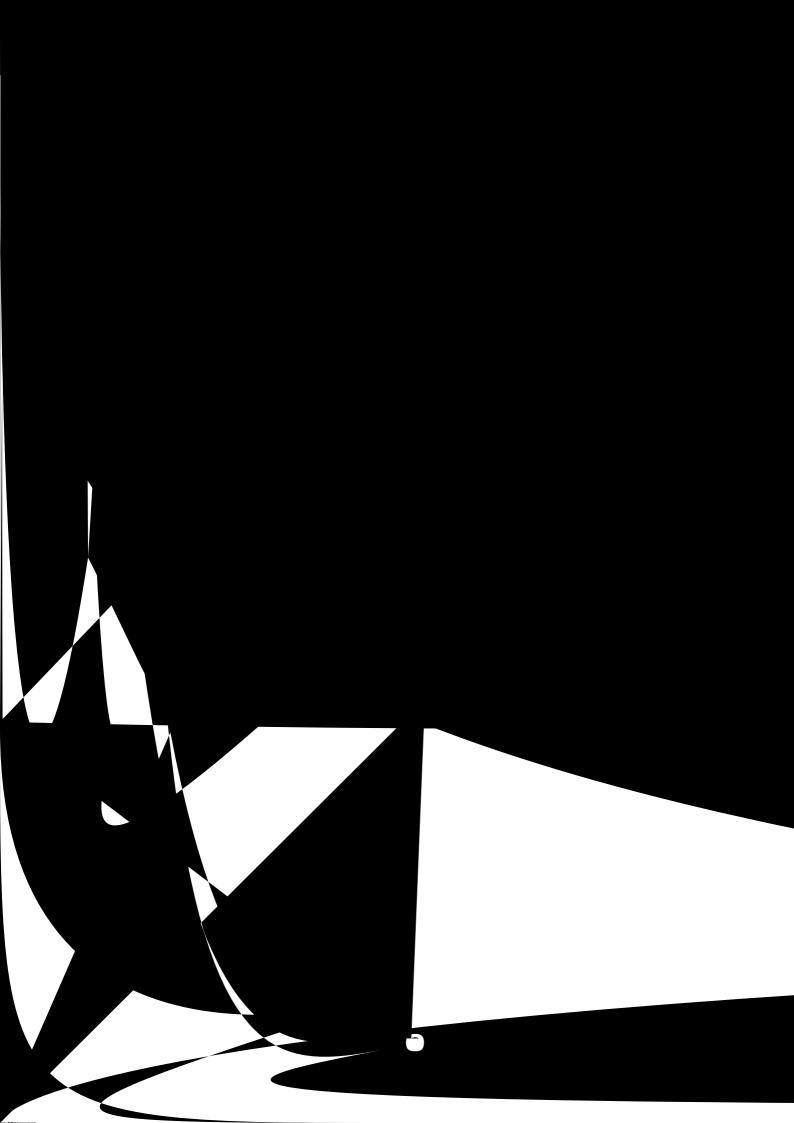

AES is not yet implemented in most clients but it is in the SpeedTouch<sup>™</sup> because it will be the future security standard.

- 4 Click Apply to immediately apply your changes.
- **5** Configure your wireless client(s) with the same settings.

Access control on the SpeedTouch™ The following modes are available:

- New stations are allowed (automatically): All New stations can access the SpeedTouch™ WLAN.
- New stations are allowed (via registration): Only allowed stations in the Access Control List (ACL) have access. You can add new stations via registration. For more information, see " Allowing new wireless" on page 99
- New stations are not allowed: Only allowed stations in the Access Control List (ACL) have access.

## 5.6.6 Configuring WDS

Availability	This page is only available on SpeedTouch™ devices equipped with a wireless access point.		
What is WDS	The <b>Wireless Distribution System</b> (WDS) allows you to extend the range of your wireless network by introducing one or more WDS-enabled devices into your wireless network.		
	You can only establish WDS links with WDS-enabled devices.		
Configuring WDS	Proceed as follows to access the WDS pages on the SpeedTouch™:		
	1 In the left menu, click Home Network.		
	2 Under Wireless, click the Access Point you want to configure for WDS.		
	The Access Point names have the following format: "WLAN: " + Network Name, for example "WLAN: SpeedTouch123456.		
	3 Click Configure.		
	4 In the <b>Pick a task</b> list, click <b>Configure WDS</b> .		
Establishing a WDS	Proceed as follows:		
connection	1 In the Pick a task list, click Scan for wireless Access Points.		
	The SpeedTouch™ warns you that all associated stations will lose connectivity for a few seconds.		
	2 Click OK.		
	The SpeedTouch™ lists the results in the <b>Accessible Access Points</b> table.		
	3 Select the Access Point to which you want to establish a WDS connection.		
	4 Click Apply.		
	5 Configure this Access Point with:		
	• The same WEP key if WEP is enabled.		
	The same fixed channel		

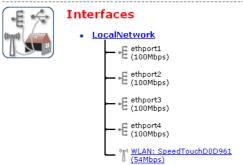

The same **fixed** channel. 

# 5.6.7 Interfaces

Interfaces overview

The **Interfaces** page gives you an overview of the interfaces used on your SpeedTouch<sup>TM</sup>. If you want to know more about the network settings of a specific interface, click the name of the interface you want to view.

# 5.6.8 Interface Settings

Overview	The <b>Overview</b> page gives you an overview of the current interface settings.

### 5.6.9 DHCP Pool

DHCP Pool page

On the **DHCP Pool** page, you can create/change a DHCP pool.

Accessing the DHCP Pool page Proceed as follows:

- 1 In the Home Network menu, click Interfaces.
- 2 Click the name of the interface which DHCP pool settings you want to change.
- 3 Click Configure.
- 4 Under DHCP Pools, click:
  - Add to add a new DCHP pool.
  - Edit to edit an existing DHCP pool.
  - **Delete** to delete an existing DHCP pool.
    - This link will only be shown if there are more than one DHCP pools.

The DHCP Pool page appears.

### 6 Troubleshooting

# Introduction This chapter suggest solutions for problems you may encounter while installing or configuring y our SpeedTouch<sup>™</sup>.

If the suggestions do not resolve the problem, look at the support pages on http:// www.speedtouch.com/support or contact your service provider.

For Internet connection troubleshooting, refer to the provided Installation and Setup Guide.

#### Topics In this chapter:

- ► General SpeedTouch<sup>™</sup> Troubleshooting
- ▶ UPnP<sup>™</sup> on Windows XP Systems
- Voice over IP Troubleshooting
- Reset to Factory Defaults

# 6.1 General SpeedTouch™ Troubleshooting

SpeedTouch™ does not work	<ul> <li>If none of the LEDs light up, make sure that:</li> <li>The SpeedTouch<sup>™</sup> is plugged into a power socket outlet.</li> <li>You are using the correct power supply for your SpeedTouch<sup>™</sup> device.</li> <li>The power requirements for your SpeedTouch<sup>™</sup> are clearly indicated on the identification label on the bottom of the SpeedTouch<sup>™</sup>.</li> <li>The SpeedTouch<sup>™</sup> is turned on via the push button at the back panel.</li> </ul>
SpeedTouch™ unreachable	If your SpeedTouch <sup>™</sup> is cannot be reached due to misconfiguration, you might consider a hardware reset to factory defaults as described in "6.4 Reset to Factory Defaults" on page 112.
Poor SpeedTouch™ performance	Make sure that the SpeedTouch™ is installed and configured as instructed in the Installation and Setup Guide or as instructed by the Service Provider.

# 6.1.1 Wired Ethernet Troubleshooting

### LANLEDdoesnotlightup

#### Make sure that:

- The LAN cable is securely connected to the 10/100Base-T port.
- You are using the correct cable type for your Ethernet equipment, that is UTP CAT5 with RJ-45 connectors.

# 6.1.2 Wireless Ethernet Troubleshooting

Not able to connect	Check the following:
wireless clients	<ul> <li>If registration is enabled, you must press the 'Association' button to register the wireless client or search for wireless devices via the embedded Web pages.</li> </ul>
	Make sure the SpeedTouch™ Association Control List is not locked. You can check this on the Web pages. On the Wireless Access Point settings, make sure New stations are not allowed is NOT selected.
No wireless connectivity	Make sure that:
	Both the wireless client adapter and the SpeedTouch™ are allowed to connect through wireless channels as defined for local regulatory domain.
	<ul> <li>The WLAN client is configured for the correct wireless settings (SSID, security settings).</li> </ul>
	Check the signal strength, indicated by the wireless client manager. If the signal is low, try to place the SpeedTouch™ or to direct the SpeedTouch™'s antenna for optimal performance.
	<ul> <li>Make sure that the wireless client adapter is enabled (message like "radio on").</li> </ul>
Poor wireless	Check the following:
connectivity or reach	<ul> <li>Choose automatic channel selection or carefully select a radio channel that does not interfere with other radio channels.</li> </ul>
	Make sure both the WLAN client adapter and the SpeedTouch <sup>™</sup> are allowed to connect through wireless channels as defined for local regulatory domain.
	Check the location of the SpeedTouch™ in the building.

- Check the location of the SpeedTouch™ in the building.
  Check the signal strength, indicated by the wireless client manager. If the
- Check the signal strength, indicated by the wireless client manager. If the signal is low, try to place the SpeedTouch™ or to direct the SpeedTouch™'s antenna for optimal performance.

## 6.2 UPnP™ on Windows XP Systems

SpeedTouch™ not	Check	the following:
detected by UPnP™ or IGD Control Client		Make sure the UPnP™ and Internet Gateway Device Control Client Networking components are added to your Windows XP system.
		Your computer doesn′t support UPnP™ if you run an operating system other than Windows XP and Windows Millennium.
		Make sure that UPnP™ is not disabled in the SpeedTouch™ Web page; see "5.5.3 Game & Application Sharing″ on page 67.
Adding UPnP™		are running Microsoft Windows XP, it is recommended to add the UPnP™ onent to your system.
	Proce	ed as follows:
	1	In the Start menu, click (Settings >) Control Panel.
		The <b>Control Pane</b> l window appears.
	2	Click Add or Remove Programs.
		The Add or Remove Programs window appears.
	3	Click Add/Remove Windows Components.
		In the Windows Components Wizard, select Networking Services in the Components list and click Details.
		You can add or remove a component, click the checkbox. A shaded box means that only pat of the component will be instaled. To see what's included in a component, click Details. Component will be instaled. To see what's included in a component, click Details. Details. Details. Control and Park Services. D Other Network File and Plant Services.
		Total disk space required: 0.0 MB Details Space evailable on disk: 2386.9 MB
		In the Networking Services window, select Universal Plug and Play or UPnP User Interface and click OK.
		Networking Services     Image: Component. click the check box. A shaded box means that only part of the component will be installed. To see what's included in a component, click betails.       Subgromponents of Networking Services:     0.0 MB       Image: Simple TOP/P Services     0.0 MB       Image: Universal Flug and Flagy     0.2 MB
		Description: Allows your computer to discover and control Universal Plug and Play

6 Click Next to start the installation and follow the instructions in the Windows Components Wizard.

#### Adding IGD Discovery and Control

Your Windows XP system is able to discover and control Internet Gateway Devices (IGD), like the SpeedTouch<sup>™</sup> on your local network. Therefore it is recommended to add the IGD Discovery and Control client to your system.

Proceed as follows:

- 1 On the Windows taskbar, click Start.
- 2 Select (Settings >) Control Panel > Add or Remove Programs.
- 3 In the Add or Remove Programs window, click Add/Remove Windows Components.

The Windows Components Wizard appears:

indows Components		8
You can add or remove comp	ionents of Windows XP.	
To add or remove a compone part of the component will be Details.		
Components:		
🗹 🎀 MSN Explorer		13.5 MB 🔼

- 6 Click Next to start the installation and follow the instructions in the Windows Components Wizard.
- 7 At the end of the procedure the wizard informs you that the installation was successful. Click **Finish** to quit.

## 6.3 Voice over IP Troubleshooting

Introduction	If you cannot establish a phone call via your SpeedTouch™, try the suggestions below.
Calling over VoIP	<ul> <li>If you have problems calling via VoIP, check whether:</li> <li>Your telephone is correctly connected to the SpeedTouch<sup>™</sup>.</li> <li>Your telephone is working on the PSTN network: <ul> <li>Connect your phone directly to PSTN.</li> <li>Try to make a phone call.</li> </ul> </li> <li>The call agent's IP address and call agent's port number are configured correctly.</li> <li>The PWR, PPP and VoIP Ready LEDs are on.</li> </ul>
	As soon as the VoIP Ready LEDs are on. As not as the VoIP Ready LED turns on, you will hear a click, indicating the switch from PSTN to VoIP.
Calling over PSTN	<ul> <li>If you have problems calling via the regular phone line, check whether:</li> <li>Your telephone is correctly connected to the SpeedTouch<sup>™</sup>.</li> <li>If the SpeedTouch<sup>™</sup> is turned off, phone calls are always routed over PSTN.</li> <li>Your telephone is working on the PSTN network: <ul> <li>Connect your phone directly to PSTN.</li> <li>Try to make a phone call.</li> </ul> </li> <li>The Forced FXO service is activated, or whether your service provider requested you to dial an extra prefix for making calls via PSTN.</li> </ul>

speed**touch**™

If VoIP is enabled (VoIP Ready LED is on), and when making a forced FXO call, you will hear a click, indicating the switch from VoIP to PSTN.

### 6.4 Reset to Factory Defaults

Resetting your SpeedTouch™ You might consider a reset to factory defaults as described below.

Be aware that a reset to factory defaults will revoke all configurational changes you made to the SpeedTouch™.

You can choose between:

- Software reset
- Hardware reset

A reset to factory default settings deletes the configuration profile settings. Therefore, after the reset, a reconfiguration of your SpeedTouch<sup>™</sup> will be needed.

Also your WLAN clients will have to be re-associated, as described in "2.3.2 Connecting Wireless Clients for the First Time" on page 23.

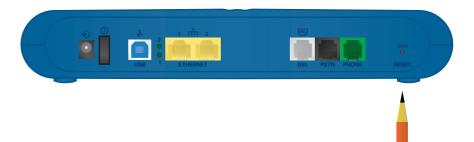

Software reset Proceed as follows:

- 1 Go to the SpeedTouch<sup>™</sup> Web pages.
- 2 In the menu, select **SpeedTouch > Configuration**.
- In the Pick a task list, click Reset my SpeedTouch to default settings.
   The SpeedTouch<sup>™</sup> restarts.
- 4 The SpeedTouch<sup>™</sup> returns to the SpeedTouch<sup>™</sup> home page (unless the IP address of your computer is not in the same subnet as the default IP address of the SpeedTouch<sup>™</sup>, being 192.168.1.254).

Hardware reset

Proceed as follows:

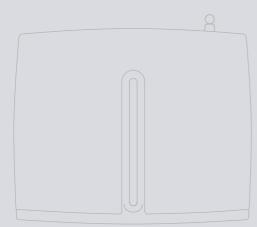

- 1 Make sure the SpeedTouch<sup>™</sup> is turned on.
- 2 Use a pen or an unfolded paperclip to push the recessed reset button on the back panel. The reset button is marked with a red circle. Push it until the power LED lights red this will take about 7 seconds.

- **3** Release the reset button.
- 4 The SpeedTouch<sup>™</sup> restarts.
